

- ① Fasten hangerstrip / jogglestrip to wall at required height. Ensure strip is level and that it runs the entire length of enclosure.
  - ② Mount backplate to wall, backplate butts up to bottom edge of hangerstrip / jogglestrip and fastens through provided holes. (Fasteners by others)
  - ③ Mount BKTCE brackets flush to and under the hanger strip. Note that the backplate may or may not line up with the bottom of the brackets depending on if hangerstrip or joggle strip is used. In either case, performance will not be affected by the slight difference between the bracket and the backplate.
  - ④ For 2 tier elements, mount and fasten BKTAT brackets on to the BKTCE brackets. (Not shown)
  - ⑤ Install cradles onto brackets by placing cradle on bracket and insert the plastic fastener through the slot in the cradle into the hole in the bracket.
  - ⑥ Install heating element onto BKTCE brackets (and BKTAT brackets if used).
  - ⑦ Ensure tubing rests on cradle.
- For installation of enclosure, please refer to appropriate enclosure installation instructions for the enclosure that is being installing
